Yamaha Motor Co., Ltd.

## Corporate Philosophy

### - Corporate Mission -

#### **Kando\* Creating Company**

Offering new excitement and a more fulfilling life for people all over the world

Yamaha Motor strives to realize peoples' dreams with ingenuity and passion, and to always be a company people look to for the next exciting product or concept that provides exceptional value and deep satisfaction.

\* **Kando** is a Japanese word for the simultaneous feelings of deep satisfaction and intense excitement that we experience when we encounter something of exceptional value.

### - Management Principles -

#### **1. Creating value that surpasses customer expectations**

To continue to produce value that moves people, we must remain keenly aware of the customer's evolving needs.

We must strive to find success by always surpassing customer expectations with safe, high-quality products and services.

#### **2. Establishing a corporate environment that fosters self-esteem**

We must build a corporate culture that encourages enterprise and enhances corporate vitality.

The focus will be on nurturing the creativity and ability of our employees, with an equitable system of evaluation and rewards.

#### **3. Fulfilling social responsibilities globally**

As a good corporate citizen, we act from a worldwide perspective and in accordance with global standards.

We must conduct our corporate activities with concern for the environment and communities and fulfill our social responsibility with honesty and sincerity.

### - Action Guidelines -

#### **Acting with Speed Spirit of Challenge Persistence**

Meeting change with swift and informed action

Courage to set higher goals without fear of failure

Working with tenacity to achieve desired results, and then evaluating them

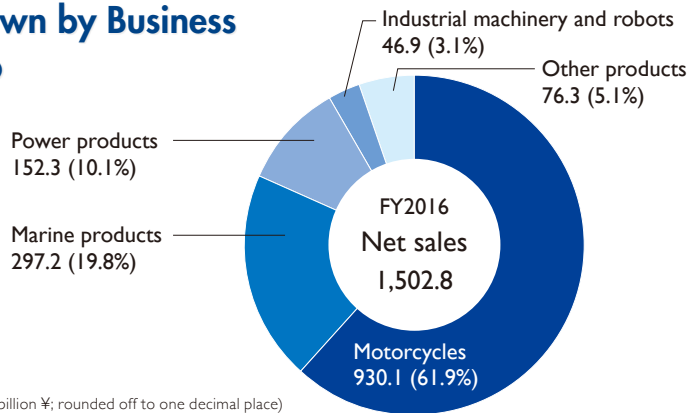

## Operating Performance (Consolidated Basis)

(Unit: billion ¥; rounded off to one decimal place)

	FY2014	FY2015	FY2016	FY2017 (Plan)
Net sales	1,521.2	1,631.2	1,502.8	1,600.0
Operating income	87.2	130.3	108.6	120.0
Ordinary income	97.3	125.2	102.1	120.0
Profit attributable to owners of parent	68.5	60.0	63.2	75.0
Exchange rate (USD)	106 JPY	121 JPY	109 JPY	110 JPY
Exchange rate (EUR)	140 JPY	134 JPY	120 JPY	115 JPY
Capital expenditures	65.9	64.1	61.3	57.0
Depreciation expenses	37.7	44.3	42.4	46.0
Research and development expenses	84.5	91.3	94.9	97.0
Equity ratio	35.1%	37.6%	40.5%	42.2%
Interest-bearing debt	403.7	410.1	364.4	400.0
Debt/equity ratio (gross)	0.88	0.84	0.68	0.69
ROE	16.2%	12.6%	12.3%	13.5%
Cash and cash equivalents at the end of the year	137.3	107.6	135.5	—
Percentage of overseas sales	89.3%	89.8%	89.1%	89.7%
Percentage of motorcycle business sales	64.3%	63.3%	61.9%	63.8%
Net cash provided by (used in) operating activities	93.6	28.5	143.2	—
Net cash provided by (used in) investing activities	(72.5)	(68.5)	(46.5)	—
Net cash provided by (used in) financing activities	(8.9)	6.8	(67.6)	—

Note: From fiscal 2016 (the fiscal year ended December 31, 2016), sales finance-related revenue and expenses previously recorded as "Selling, general and administrative expenses," "Non-operating income," and "Non-operating expenses" are being recorded as "Net sales," "Cost of sales," and "Selling, general and administrative expenses." ## Sales Breakdown by Business (Consolidated Basis)

(Unit: billion ¥; rounded off to one decimal place)

### Major products in each segment

"Motorcycles"  
Motorcycles and knockdown parts for overseas production, etc.

"Marine products"  
Outboard motors, boats, personal watercraft, pools, etc.

"Power products"  
ATVs, recreational off-highway vehicles, snowmobiles, golf cars, generators, etc.

"Industrial machinery and robots"  
Surface mounters, industrial robots, etc.

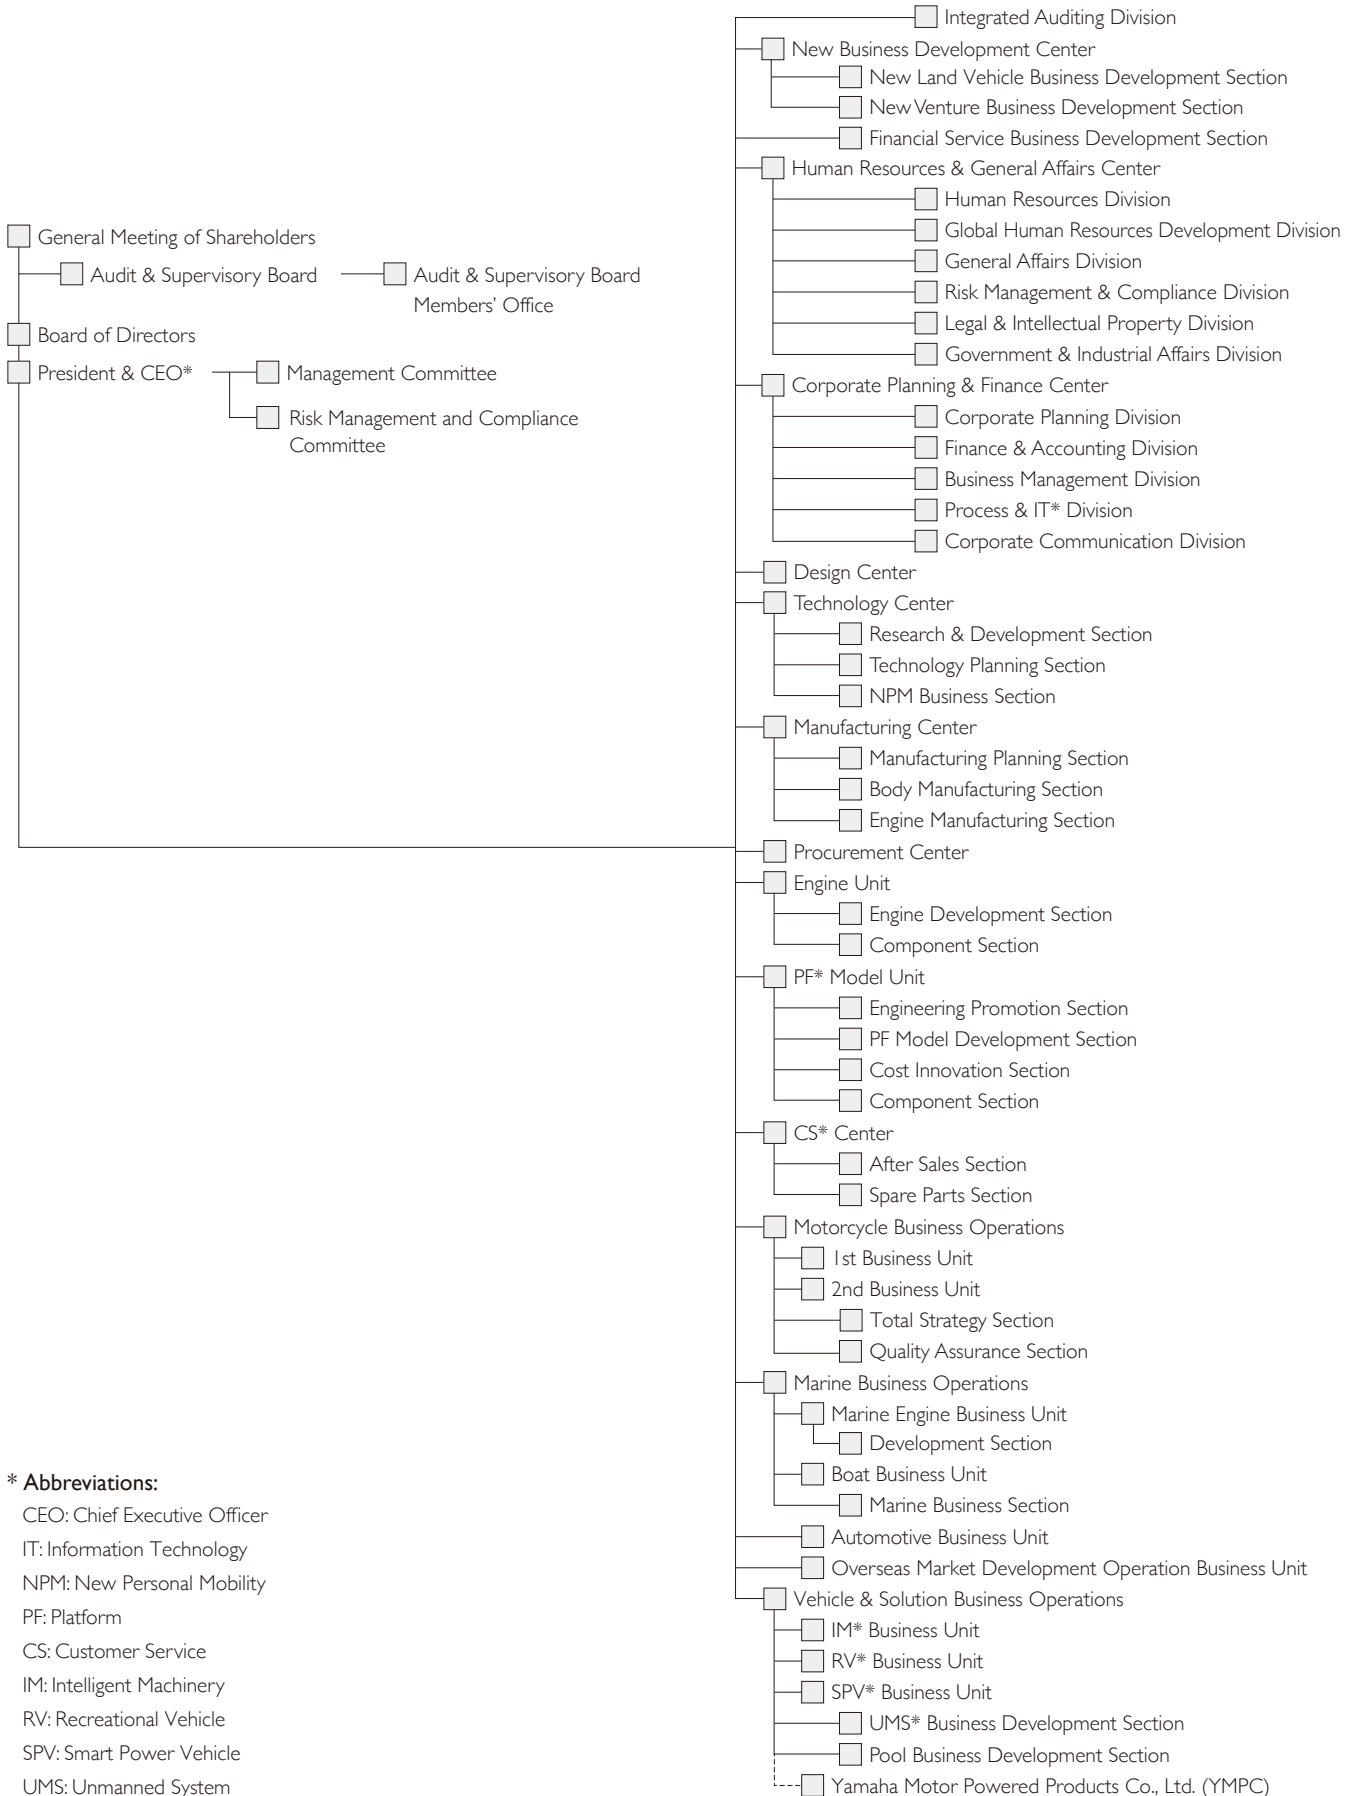

"Other products"  
Electrically power assisted bicycles, automobile engines, etc.

## Sales Breakdown by Region (Consolidated Basis)

(Unit: billion ¥; rounded off to one decimal place)

# Organization (As of April 1, 2017)

**\* Abbreviations:**  
 CEO: Chief Executive Officer  
 IT: Information Technology  
 NPM: New Personal Mobility  
 PF: Platform  
 CS: Customer Service  
 IM: Intelligent Machinery  
 RV: Recreational Vehicle  
 SPV: Smart Power Vehicle  
 UMS: Unmanned System

# Board of Directors, Audit & Supervisory Board Members and Executive Officers

(As of April 1, 2017)

## Board of Directors

President and Representative Director

**Hiroyuki Yanagi**

Representative Director

### Product Profile

Motorcycles play a familiar and vital role in the lives of people around the world, their applications spanning from pure utility, such as the transportation of goods, to personal enjoyment and sports. The Yamaha Motor group satisfies these needs with its diverse product lineup. Yamaha motorcycles are made to a variety of specifications, each type featuring unique technologies serving its particular use: scooters, used primarily for day-to-day mobility, such as commuting and shopping trips; sports and cruiser models, used widely in urban areas and for long-distance touring; trail models for off-road excursions; and racing machines for road racing, motocross and other competitions.

### Background of the Business

During World War II, Nippon Gakki Co., Ltd. (founded in 1897, presently Yamaha Corporation), the company from which Yamaha Motor was later spun off, was assigned to apply its technologies in musical instrument manufacturing to the production of propellers for military aircraft. After the War ended, the company sought ways to use its manufacturing facilities for peaceful ends. Eventually, it entered the motorcycle business as the motorcycle manufacturing division of Nippon Gakki. The company's first motorcycle model, the YA-1,

got off to a successful start, winning in its debut entries at Japan's top two motorcycle races at the time, while also receiving high acclaim for its product quality. To scale up production and market the YA-1, Yamaha Motor Co., Ltd. was established. Some years later, in 1961, Yamaha entered its first World GP race. Since then and to this day, Yamaha has continued to challenge itself on the racing scene, making the art of engineering based on technologies and know-how a hallmark of the Yamaha brand.

### Current Business and Market Conditions

#### Japan

Looking at the market as a whole, scooters with an engine displacement of 50cc and under (class I), which are used primarily for commuting and work-related activities, occupy almost half of all unit sales. Motorcycles with an engine capacity of 51cc or larger fall into a number of categories, from scooters to large motorcycles and sports models for personal enjoyment. The Japanese market is also unique in that it has a driver's license restricted to operation of AT (automatic transmission) motorcycles. In recent years, large motorcycles for riders interested in touring and sport riding as well as highly practical 125cc scooters have been popular.

### Japan Motorcycle License Types and Regulations

Displacement	50cc and under	Over 50cc to 125cc and under	Over 125cc to 250cc and under	Over 250cc to 400cc and under	Over 400cc
Road Traffic Act designation	Moped		Regular motorcycle		Large motorcycle
Road Transport Vehicle Act designation	Class I moped	Class II moped	Light two-wheeled vehicle	Compact two-wheeled vehicle	
License required	Moped license	Limited compact license	Regular motorcycle license		Large motorcycle license
Speed limit on normal roads	30 km/h	60 km/h			
Legal number of riders	I	2 (excluding vehicles with no rear seat)			
Highway usage	Prohibited		Allowed		
Two-step right turn	Required	Prohibited			
Curbside lane usage	Required	Not required			
Vehicle inspection	Not required			Required

### Europe

As one would expect from the birthplace of motorcycles, motorcycles have a well-established place in European society as part of the culture. The market is characterized by widespread use of motorcycles among riders of all ages as a commuter vehicle and as means for recreation, from touring through the countryside to circuit racing and other sports. Motorsports are also popular there. Over half of the MotoGP racing series, the world's premier motorcycle racing championship, is held in Europe.

### North America

The North American market is characterized by its predominance of motorcycle enthusiasts. Cruisers, with their low-riding seats and long bodies—perfectly suited for riding on long stretches of straight, open road—are a representative category, but there is also a large segment of users who enjoy riding off-road or on mountainous terrain for sport or recreation. The popularity and extensive variety of motorsports practices by professionals and amateurs alike is another unique quality of the North American market.

### ASEAN Region

In the ASEAN region, motorcycles are a primary mode of transportation for commuting to work and school and for daily living in many communities. They also serve an important role as social infrastructure, assisting the flow of goods and services. Practical, smaller displacement motorcycles around 125cc are traditionally the mainstream choice. However, since the turn of the century there has been a growing segment of users resembling those in developed markets who favor more personalized and luxurious features. Yamaha was quick to introduce automatic transmission motorcycles to this market, and is now recognized as a leading company.

### China

With domestic demand for new motorcycles around 8 million units annually, China is the world's second largest motorcycle market and home to numerous motorcycle makers. Demand for scooters, which previously accounted for roughly 10% of total demand, grew to almost 40% of demand during 2016, and is expected to continue to increase going forward.

In addition, with growing awareness of environmental issues, the number of users selecting fuel injection-equipped models is increasing, and Yamaha is pursuing a product strategy that focuses on attracting these customers.

### India

India has become the world's largest motorcycle market, with total demand for new models reaching about 18 million units in 2016. The scooter category in particular, is showing remarkable growth, and now accounts for roughly 30% of total demand. With the country's development having entered a period of increased motorization, Yamaha has introduced new scooters every year since 2012, and these models have been well received, particularly by young customers. Yamaha is also working to increase sales by expanding its lineup of lower priced, more affordable models.

SR-X 24 multipurpose boat

EXULT36 large boat

DW-480-0A fishing boat

## Product Profile

Boats are used for two major purposes: commercial use and leisure. Commercial boats can be categorized roughly into Japanese-style utility boats and fishing boats, both of which are an indispensable part of the everyday lives of fishermen. Recreational boats include powerboats, used for activities from sport fishing to cruising and water-skiing, and sailboats.

## Background of the Business

Since the latter part of the 1950s, Yamaha started joint research and development of FRP (Fiber Reinforced Plastics)—a promising new material at the time—with Nippon Gakki Co., Ltd. (presently Yamaha Corporation), and in 1960 began producing and marketing FRP boats. In 1965, the Company also started production of sailboats and fishing boats.

Yamaha Motor has continuously developed and designed its products using performance simulation and 3D CAD systems, and introduced new manufacturing technologies to reduce the environmental impacts of production.

## Current Business and Market Conditions

In Japan, Yamaha Motor is a full-spectrum marine manufacturer, offering a full lineup of products in all categories, from fishing and utility boats—with hulls designed to fit each region's fishing methods—to large recreational sports boats and sailing cruisers. The business is also currently expanding into overseas markets primarily in the ASEAN region and China.

## Production

	Name of company	Location
Fishing boats, utility boats	Yamaki Manufacturing Co., Ltd.*1	Yakumo, Hokkaido, Japan
Small boats, utility boats	Yamaha Amakusa Manufacturing Co., Ltd.*1	Kamiyamakusa, Kumamoto, Japan
Medium-size and large boats	YM Shido Co., Ltd.*2	Sanuki, Kagawa, Japan

\*1 Group company \*2 Contract manufacturer

## FY2016 domestic demand for pleasure-use boat

Note: Yamaha Motor surveys

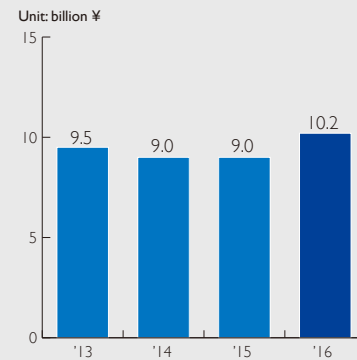

## Yamaha Motor unit sales

Note: The large rise in fishing and utility boat sales in 2013 is due to the increase in production to assist in the recovery efforts from the Great East Japan Earthquake and Tsunami.

## Yamaha Motor sales

### Product Profile

Marine engines used to propel boats can be categorized into three types: outboard motors, stern drives (inboard-outboard motors), and inboard motors. Outboard motors, which are suited for small to medium-size boats, are mainly known for their excellent affordability, environmental friendliness, ease of maintenance and high space efficiency and are used by a variety of people all over the world. In developed regions like Europe and North America, they are primarily used for leisure, while in emerging countries they are predominantly used for fishing and transport/transportation.

### Background of the Business

Applying its small engine technology developed for motorcycles, Yamaha Motor released its first marine engine, the small outboard engine P-7, in 1960. In the more than half-century that followed, the Company has expanded its marine engine lineup to suit manifold uses and conditions in the various locations they are used, focusing especially on outboard motors, including models with increasingly large horsepower and models that have better fuel efficiency and are designed to withstand more extreme environments. Cumulative production of Yamaha outboard motors reached 10 million units in April 2013.

### Current Business and Market Conditions

More than 90% of Yamaha outboard motors are exported to markets worldwide, where they are currently being sold in about 180 countries and territories. Their applications cover everything from fishing to leisure, and include the more simply constructed 2-stroke models suitable for operating environments in emerging countries, 4-stroke models which are in high demand in developed countries

and also offer exceptional environmental performance, as well as electric models used for freshwater and inshore fishing and other activities. Yamaha Motor also offers a complete lineup of inboard and stern drive motors for everything from commercial applications to recreational boating.

Also, among our products installed on boats to complement outboard motors is an information management system that relays engine and navigational statuses to the driver, and a boat control system that assists in maneuvering medium-size to large boats at low speeds through narrow areas.

### Environmental Compliance

Yamaha Motor offers a full line of products that comply with voluntary restrictions set by the Japan Marine Industry Association, as well as standards set by 2010 EPA (United States Environmental Protection Agency) regulations on exhaust emissions and 2008 CARB (California Air Resources Board) regulations.

### Production

\* Group company

## Outboard Motor Cooling Structure and Features

An outboard motor brings in water from the outside and uses it to cool the engine. This is the main difference between outboards and land vehicles with liquid-cooled engines like motorcycles.

## Helm Master Boat Control System

SR320FB cruiser featuring Helm Master

The Helm Master digitally controls all the steering, gear shifting and throttle work of twin or triple mount large-class Yamaha outboards. Complementing the standard steering and remote control unit, the single joystick control enables fore-aft, port-starboard and diagonal motion as well as in-place rotation of the bow.

# Personal Watercraft

MJ-GPI800 personal watercraft

242 LIMITED S E-Series sport boat

## Product Profile

Personal watercraft (or PWC) come in two varieties: one that requires the rider to stand (one-person capacity), and another that is ridden from a seated position (up to three people). PWC mount a small engine, but rather than using a propeller for propulsion they draw in water from the intake section at the bottom of the hull and shoot it out from the back with a jet-propulsion mechanism. The Yamaha 242 Limited S is a sport boat that uses the same kind of propulsion system.

## Background of the Business

In 1986, Yamaha Motor launched its first product, the MJ-500T. The product's marketing concept, "A water vessel anyone can ride, with assurance and convenience," was welcomed by markets and effectively expanded the enjoyment of marine recreation beyond existing mainstream activities like cruising and fishing. PWC attract many users, mainly in North America.

## Current Business and Market Conditions

Yamaha PWC feature a highly stable and streamlined body built on technologies Yamaha Motor developed for boats, and a compact, lightweight, yet powerful engine utilizing the Company's motorcycle and marine engine technologies. Most Yamaha PWC employ 4-stroke engines. These models meet environmental regulations in the U.S. and Japan, the largest markets, which include U.S. EPA (Environmental Protection Agency) regulations and Japan Marine Industry Association voluntary regulations.

# Swimming Pools

School pools

Flat pools (GRANSCINA)

Children's pools

Leisure pools

## Product Profile

In Japan, school swimming pools, children's pools, leisure pools, pools for health and rehabilitative use, competition pools and pool renovation form the major demand for this segment. By material, pools can be categorized into FRP (Fiber Reinforced Plastics) pools, metal pools and concrete pools.

### [Reference] Advantages of FRP Pools

FRP is a strong, lightweight material that molds easily. FRP pools are resistant to weathering and earthquakes and retain moisture well. Construction time is also shorter because the units from the factory are simply assembled on-site.

## Background of the Business

Utilizing FRP technologies cultivated in its boat development and manufacturing, Yamaha Motor commercially released Japan's first 100% FRP pool in 1974. Yamaha has supplied a large number of pools across Japan over the past 42 years.

As of the end of 2016, we had shipped a total of 6,068 school pools, making us Japan's top supplier.

## Current Business and Market Conditions

As pools at public facilities, kindergartens and nursery schools, and elementary and junior high schools increasingly deteriorate, demand for new construction and renovations is increasing. Pools are also being used at social welfare facilities and medical institutions for safe walking and exercise to improve the health of the elderly and persons with disabilities.

Yamaha Motor is proactively expanding its product lineup with pools for a variety of purposes for different generations and lifestyles, while at the same time introducing new technologies and equipment to make pools environmentally friendly through re-use and recycling.

We also provide maintenance and other operations for public pool facilities, and are utilizing the expertise we have developed through these operations in new products.

As a leading pool company, Yamaha offers total support, from planning and design to manufacturing, installation, and after-sales service.

# All-Terrain Vehicles & Recreational Off-highway Vehicles

Grizzly

YXZ1000R

Wolverine R-Spec

## Product Profile

All-Terrain Vehicles (ATVs) and Recreational Off-highway Vehicles (ROVs) are off-road-specific vehicles capable of handling all sorts of unpaved or rough terrain found in grasslands, mountain trails, sandy areas, etc. ATVs seat one rider and have a steering system with handlebars, etc., similar to a motorcycle, while ROVs are designed to fit two or more people and have a steering wheel system, etc., similar to an automobile. Both are used in a wide range of ways, from leisure and sport riding to utility work in the agriculture industry, etc.

## Background of the Business

Yamaha's ATVs were developed using technologies created and matured in the process of developing and manufacturing off-road motorcycles. Sales of Yamaha ATVs began in the U.S. in 1979 with Yamaha Motor's first ATV, the YT125. Since then, Yamaha has gone on to market a variety of ATV models that answer real market needs. In the ROV segment, following the releases of the multi-purpose VIKING and VIKING VI, and the recreational Wolverine model, we began selling the YXZ1000R pure sports model in

North America and other overseas markets.

## Current Business and Market Conditions

The U.S. market accounts for more than 40% of worldwide ATV demand due to its large stretches of natural terrain, unpaved roads, and large ranches and farms all over the country. Yamaha Motor meets these diverse needs with its wide range of products that include utility models, sports models and more.

The main market for ROVs is also the U.S. In addition to demand as a vehicle for outdoor recreation, there is stable demand for ROVs as vehicles for utility use in a variety of industries, and market scale is growing year after year.

# Snowmobiles

Sidewinder X-TX SE 137

VK 540V

VK Professional II

## Product Profile

The snowmobile uses two skis at the front for changing directions and track belts at the rear for engine-driven propulsion. It has developed into a mode of transportation for people in snowy areas, and also as a source of motorsports and leisure enjoyment. Applications can be broken down roughly into leisure and utility. Additionally, in Japan, snowmobiles are also used in winter for power line maintenance, for spreading snow-melting agents on cultivated areas, for fish farming in frozen lakes, etc.

## Background of the Business

Applying the engine technologies it had developed for motorcycles, Yamaha Motor released its first snowmobile model, the SL350, in 1968 and its first model for recreational use in 1970. Since then the Company has worked to expand its lineup, catering to a variety of needs as the only snowmobile manufacturer (of completely built up units) in Japan.

## Current Business and Market Conditions

While North America, Russia and the Scandinavian countries of Sweden, Norway and Finland constitute the largest markets, Yamaha snowmobiles are sold in over 30 countries worldwide, including Japan and other countries throughout Europe and Asia. In recent years, there have been greater calls for better environmental performance from snowmobiles as well. Yamaha Motor has answered this by continuing to pioneer the development of models with 4-stroke engines.

G30As (five-passenger model)

Drive2 (two-passenger model)

## Product Profile

Golf cars have become popular on golf courses today because they save labor, let golfers transport their own clubs, lighten work for caddies, and encourage smoother, more enjoyable rounds. Various specifications are available based on market and consumer (golf clubs and resorts) needs. Options include passenger capacity (1, 2, or 5 passengers), the power unit (gasoline engine or electric motor) and the operating system (electromagnetic guidance or manual).

## Background of the Business

In 1972, Yamaha Motor began developing a land car for use at a resort owned and operated by Nippon Gakki (presently Yamaha Corporation), later segueing into the development of golf cars, which the Company released for the first time in 1975 with its YG292 model. Subsequently, as the business has grown, in addition to production at our factory in Japan, we commenced production at a factory in the United States in 1988 followed by Thailand in 2015, and have now produced more than one million golf cars in total.

## Current Business and Market Conditions

In Japan, demand is highest for five-passenger models, which also carry caddies, and in the U.S, where caddies are often not used, demand is highest for two-passenger models. Working to create an easier, more comfortable round for golfers, Yamaha Motor introduced in 1996 a model that can be remote control operated, with an electromagnetic guidance system that uses mounted sensors to automatically trace electric cables buried underground. In 2000, the Company introduced a more environmentally friendly model equipped with a much quieter electric motor.

## Generators

EF1600iS

EF5500iSDE

### Product Profile

Yamaha generators use a small engine powered by gasoline and gas cartridges to generate electricity. Models offered include everything from light and compact generators that can be carried around with one hand, to utility generators used as a power source for tools and lighting equipment at construction sites and in other settings. Yamaha Motor also provides inverter-type generators, which can be used as a power source for computers and other precision electronic equipment. These generators are also indispensable as an emergency power source during power outages and in disaster areas.

### Background of the Business

Building on its small engine technologies, Yamaha Motor released its first generator model, the ET1250, in 1973.

### Current Business and Market Conditions

As needs for generators expand beyond business applications, these products now need to be quieter, easier to operate, and applicable

to a broader range of operating environments in addition to offering sufficient durability, reliability, and quality sustained power. Meanwhile, Yamaha Motor is actively developing new 4-stroke and inverter-type models that meet voluntary regulations set by the Japan Land Engine Manufacturers Association and other strict emissions standards adopted around the world.

## Snow Throwers

YS-1390AR

YS-860B

### Product Profile

Snow throwers make living out the winter easier in snow-bound regions such as Hokkaido, Tohoku, Kita-Kanto, Koushinetsu, Hokuriku, and Sanin in Japan. Yamaha Motor offers a broad range of snow thrower models, from compact units handy for clearing porches and walkways at home to large models suited for commercial use.

### Background of the Business

Utilizing its small engine technologies, Yamaha Motor released its first snow thrower model, the YT665, in 1978.

### Current Business and Market Conditions

Yamaha Motor offers a total of 12 snow thrower models, ranging from a compact 2-horsepower home-use unit to a 13-horsepower commercial-use model. Yamaha snow throwers have been recognized for the materials and construction of their various components, their exceptional cold-weather performance, and unique designs that enable quiet operation—advantages made possible with the Company's snowmobile manufacturing expertise.

## Electrically Power Assisted Bicycles

PAS Kiss mini un

PAS Baby un

PAS Natura XL Deluxe

PAS Mina

YPJ-R

YPJ-C

### Product Profile

Electrically power assisted bicycles are bicycles equipped with a motor and battery that supply power to assist the rider's pedaling. The Yamaha PAS\* released in 1993 was the first electrically power assisted bicycle in the world. Yamaha PAS bicycles are not only easy-to-use and convenient, they also effectively eliminate the major drawbacks of conventional bicycles (difficulty in riding uphill, against the wind, or when carrying cargo), making them accessible to virtually everyone. Electrically power assisted bicycles are gaining popularity as a new category of commuter vehicle for people of all ages, facilitating various forms of personal transportation—commuting to and from work or school, taking children to kindergarten and back home, shopping, pleasure, and even for running errands in the city.

\* The "PAS" product name is the acronym for "Power Assist System."

### Background of the Business

In the 1980s, a new consciousness emerged around global environmental problems such as energy conservation and societal challenges such as Japan's aging population and low birthrate. This spurred Yamaha Motor's efforts to develop a new vehicle that transcended the boundaries set by conventional product categories. Deploying a new development concept that focused on providing a "people-friendly, environmentally friendly vehicle that puts human perceptions first," Yamaha Motor launched in 1993 the world's first electrically power assisted bicycle. Since then, the Company has pioneered the market through technological improvements and by driving demand; by the end of 2008, Yamaha Motor had sold over one million units. In 2014, we developed next-generation drive units based on the new GREEN CORE concept—creating units that are compact, lightweight and highly functional, and offer an enjoyable drive while being environmentally friendly, and in 2015, these units were intro-

duced in main PAS models. In 2015, we launched the YPJ brand as a new concept in sports-type electrically power assisted bicycles with the YPJ-R as its first model, and followed this in 2016 with the release of the hybrid YPJ-C. In addition, control technologies developed in this field are being applied to other Yamaha products in the electric wheelchair and electric motorcycle segments.

### Current Business and Market Conditions

Since developing and releasing the world's first electrically power assisted bicycle in 1993, Yamaha Motor has enhanced its PAS lineup and made a variety of advances with the evolution of the product.

In addition to expanding the scope of users and usages, demands for electrically power assisted bicycles are diversifying in line with social developments, including heightened awareness of health and environmental issues, changes in transportation environments, and high prices for gasoline, and the market is expanding as a result.

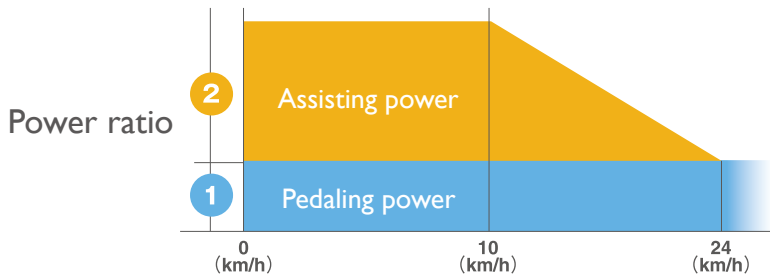

At the same time, legal standards for electrically power assisted bicycles have changed, including the revision of a law regulating the assist ratio of electrically power assisted bicycles in 2008 and the establishment of a safety standard for bicycles with two infant seats in 2009.

In addition to sales of complete bicycles and supply of the drive units on an OEM basis in Japan, in 2012, Yamaha Motor began OEM supply of drive units to a major manufacturer for use in Europe, one of the world's leading markets for electrically power assisted bicycles (where Germany and the Netherlands account for more than 50% of overall demand). Yamaha's unit sales have been increasing in line with the growth of the European market, and the business is expanding globally.

Note: In Europe, electrically power assisted bicycles are called "e-bikes."

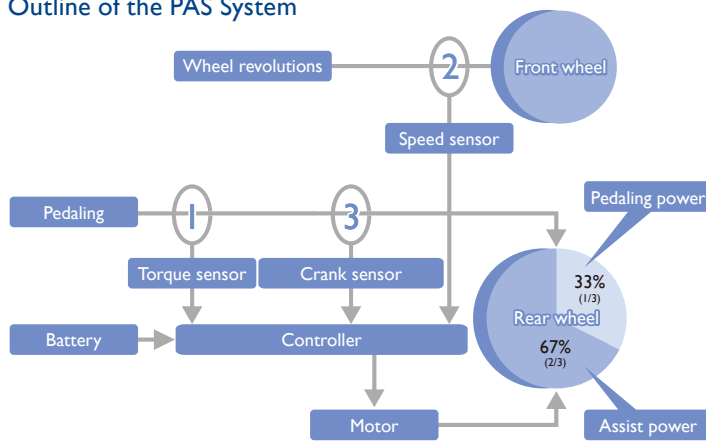

## Assistance Ratio as Set by Legal Standards in Japan

Up to 10 km/h, electric power assists pedaling at a maximum ratio of 1:2\*  
 Above 10 km/h, electric power assist is moderated to keep the bicycle from going too fast  
 Above 24 km/h, electric power assist is cut off  
 \* The maximum ratio set by legal standards

## Outline of the PAS System

1. Detects the amount of force applied to the pedals
2. Detects the speed of the bicycle while in motion
3. Detects the rotation speed of the pedals (crank)

## Electric Wheelchairs

JW Active PLUS+ electric wheelchair

JW Swing electric assist wheelchair

### Product Profile

Wheelchairs, which facilitate the mobility of the elderly and persons with disabilities, are broadly divided into manual and electrically powered types. Yamaha Motor's Joy Wheel (JW) series, which brings a new dimension to the world of wheelchairs by combining the light weight and flexibility of manual wheelchairs with the power and ease of use of electrically powered models, includes both electric power units and completely assembled electric wheelchairs. Electric power units come in two types: power units that convert manual wheelchairs into electrically powered wheelchairs, and power assist units that make manual wheelchairs easier to use.

#### - Electric Power Type -

These units add electric power to facilitate the use of manual wheelchairs while retaining manual wheelchairs' convenience of being able to fold and carry. The unit consists of a joystick for operation, two wheels with a built-in motor and clutch system, and a compact, light-weight battery.

These power units can be attached to a variety of wheelchair models, for smooth operation using a single joystick.

JWX-1 PLUS+ electric power unit and unit mounted on wheelchair

#### - Assist Type -

Power assist units use electric power to supplement the turning of the handrims of a manual wheelchair, using the same Power Assist System as Yamaha's electrically power assisted bicycles (PAS). The units consist of a motor and clutch built into the wheel hub assembly, a handrim torque sensor, and a compact, lightweight battery.

The user can switch between the JW Smart Tune optimal assist mode and two other drive modes, for ease of use suited to each user. The wheelchair can still be operated manually as well, a useful feature that makes it easy to handle and quite popular.

JWX-2 electric power assist unit and unit mounted on wheelchair

### Background of the Business

Applying its proprietary control and drive technologies to contribute to the health and social welfare of an aging population, Yamaha Motor began limited-area marketing of power units for manual wheelchairs in 1995 (followed by nationwide sales from 1996).

Since then, we have applied our proprietary advanced control and drive technologies to offer electric wheelchairs that are comfortable and convenient for users, and also minimize the effort required by caregivers.

### Current Business and Market Conditions

In Japan, most electric wheelchairs are used by persons with disabilities as certified mobility aids (eligible for government subsidies) or rented by the elderly under the long-term care insurance system.

Outside Japan, Yamaha supplies power units to manufacturers in the United States, Europe and other countries on an OEM basis.

### Production

Z:LEX surface mounter

Automated optical inspection systems

Multi-axis vertically articulated robots

SCARA robots

## Product Profile

Surface mounters are industrial robots that are designed to mount electronic components onto printed circuit boards used in the electrical components for mobile phones, automobiles, and other electronic products. Yamaha Motor has a full lineup of industrial robots, comprising single-axis robots, cartesian robots, SCARA robots, multi-axis vertically articulated robots, and linear conveyor modules, which are used in a variety of manufacturing processes including conveyance, supply, assembly, and inspection.

## Background of the Business

Yamaha Motor began research and development of industrial robots in 1974 to streamline the production of its motorcycles and improve manufacturing precision. In 1976, the Company introduced SCARA robots in-house to assemble parts on its motorcycle production lines, and in 1981 entered the industrial robot business. In 1987, the Company began marketing surface mounters, the cumulative sales of which had reached 30,000 units by 2012.

## Current Business and Market Conditions

Surface mounters, Yamaha Motor's core product in this business segment, are high-speed modular units that boast superior mounting speed in both standalone applications and multiple-unit configurations. Yamaha Motor commands the largest market share for general-purpose surface mounters. Along with a full line of surface mounters to meet changing market needs from high-speed, large-volume manufacturing to multipurpose, highly generalized manufacturing, we are expanding the business to manufacture a full lineup of chip mounting equipment from screen printers and dispensers to testers.

Yamaha stands out for its full lineup of industrial robots, from single-axis robots to multi-axis vertically articulated robots. These robots are used in a broad range of areas, including the automotive, electric and electronic, and food industries, and are making major contributions to the automation of manufacturing processes. In 2016, Yamaha announced the Advanced Robotics Automation Platform, which makes it possible to control robots, peripheral equipment, and operations from a single platform, and we continue to pursue solutions for the overall optimization of manufacturing equipment.

Yamaha Motor sales from industrial machinery and robots

## Automobile Engines

Automobile engines

Performance dampers

### Product Profile

Yamaha Motor's automobile engines feature high revolution speeds and high power, reflecting engine technologies the Company has acquired over the years through manufacturing motorcycles. The engine mounted on the Lexus LFA supercar (developed jointly with Toyota Motor Corporation) is the most recent example of these products. Yamaha Motor also develops and manufactures suspension systems and other products using related technologies. The Company's performance damper, which enhances a car's performance by creating a smoother, more comfortable ride, is highly regarded in the industry. The performance damper is featured on a wide range of cars from both domestic and overseas manufacturers, and aggregate production volume reached one million units in November 2016.

### Background of the Business

Ever since its founding, Yamaha Motor has amassed various technologies through its motorcycle development activities. Meanwhile, the Company has also conducted research and development of engine-related technologies for automobiles. In 1967, the Company entered a development and manufacturing venture for the Toyota 2000GT sports car together with Toyota Motor Corporation (then known as Toyota Motor Co., Ltd.). This had the effect of spurring further collaborative work with automobile makers. In 1989, Yamaha Motor also started participating in Formula One, the world's premier car racing series. In these ways, the Company has been a perpetual agent of innovation in automobile engine technologies.

### Production

## Other Products

### Parts and Accessories

Yamaha Motor sells replacement parts for its motorcycles, boats and other products, as well as accessories such as helmets and apparel.

### Pleasure-use Boat Mooring Equipment

Yamaha Motor sells equipment used in marina applications, such as pontoons.

## Industrial-use Unmanned Helicopters

FAZER R

Transmitter

Test spraying at a vineyard in the United States

### Product Profile

For its industrial-use unmanned helicopters, Yamaha Motor has developed support systems that incorporate a GPS-based speed control function for more stable operation, as well as altitude control systems that enable unmatched ease of operation and flying stability. These achievements bring to bear the various control technologies that are one of the core competencies of Yamaha Motor.

The new FAZER R, released in 2016, can carry a chemical payload of 32 liters, the largest of any of Yamaha Motor's industrial-use unmanned helicopters to date. For agricultural crop dusting, this makes it possible to cover four hectares without any additional agricultural chemicals and refueling, making crop dusting operations significantly more efficient and less labor-intensive.

### - Agricultural Applications -

Major users include municipalities, National Federation of Agricultural Cooperative Associations, agricultural cooperatives, crop-dusting organizations and individual farmers. Their primary application is spraying agricultural chemicals. Yamaha industrial-use unmanned helicopters used in agriculture make jobs more efficient and thus help to improve productivity and reduce labor.

### - Observational and Surveying Applications -

Yamaha Motor provides municipalities, university research institutions, and other organizations with services for using industrial-use unmanned helicopters to conduct observations, surveys and other related applications.

### Background of the Business

In the early 1980s, Yamaha Motor was commissioned by a government organization to develop an industrial-use unmanned helicopter that could easily perform agricultural crop dusting operations. In 1987, the Company practicalized the world's first industrial-use unmanned helicopter, the R-50, and commenced full-scale marketing of the product in 1989.

Since then, Yamaha has become a leading company in the business. Our industrial-use unmanned helicopters have contributed to the modernization of Japan's agriculture industry and their use has expanded to include aerial observation and survey work. In recent years, the Company has been promoting use of the helicopters for overseas agriculture markets.

## Water Purifiers and Water Purification Systems

Yamaha Motor manufactures and markets water purifiers to improve the quality of living in Africa, Southeast Asia and other regions where access to potable water is limited.

## Racing Kart Engines

Yamaha Motor manufactures and sells engines for racing karts, entry-level machines often used to gain access to more challenging four-wheel motorsports.
