

**Yamaha Motor**

**Environmental Technology Briefing Session**

7/19/2021

### ■ **President, CEO and Representative Director - Yoshihiro Hidaka**

---

**1: Long-Term Vision**

**2: Environmental Plan**

### ■ **Director, Senior Executive Officer, General Manager of Technical Research & Development Center, Heiji Maruyama**

---

**3: Carbon-neutral strategy in line with the unique style of Yamaha Motor**

**4: Specific Initiatives**

### ■ **Q&A session**

---

# **HIDAKA, Yoshihiro**

---

**President, CEO and Representative Director**

## ■ Challenges: Paris Agreement - GHG Emission Reduction Targets

There is no waiting for "greenhouse gas reduction measures". As for companies, the challenge is for the survival

### Reference to the "1.5°C" in the Paris Agreement

- Keeping the global average temperature rise below +2°C in comparison with pre-industrialization levels (1850-1900)
- Initiatives to limit the global average temperature rise to +1.5°C to pre-industrialization levels (1850-1900)
- Effective in 2016, implemented from 2020

Source: Intergovernmental Panel on Climate Change (IPCC), a summary of the "Special Report on Global Warming of 1.5 °C": Prepared by Ministry of the Environment

### Greenhouse gas reduction targets in major countries

	2030 Targets	Base year	2050 Targets
Japan	-46%	Compared to 2013	Carbon neutral
US	-50-52%	Compared to 2005	Carbon neutral
EU	-55%	Compared to 1990	Carbon neutral
UK	-68%	Compared to 1990	At least -100% (compared to 1990 levels)
China	CO2 emissions per GDP over -65%	Compared to 2005	2060 Carbon neutral

# Yamaha Motor Long-Term Vision

---

*ART for Human Possibilities*

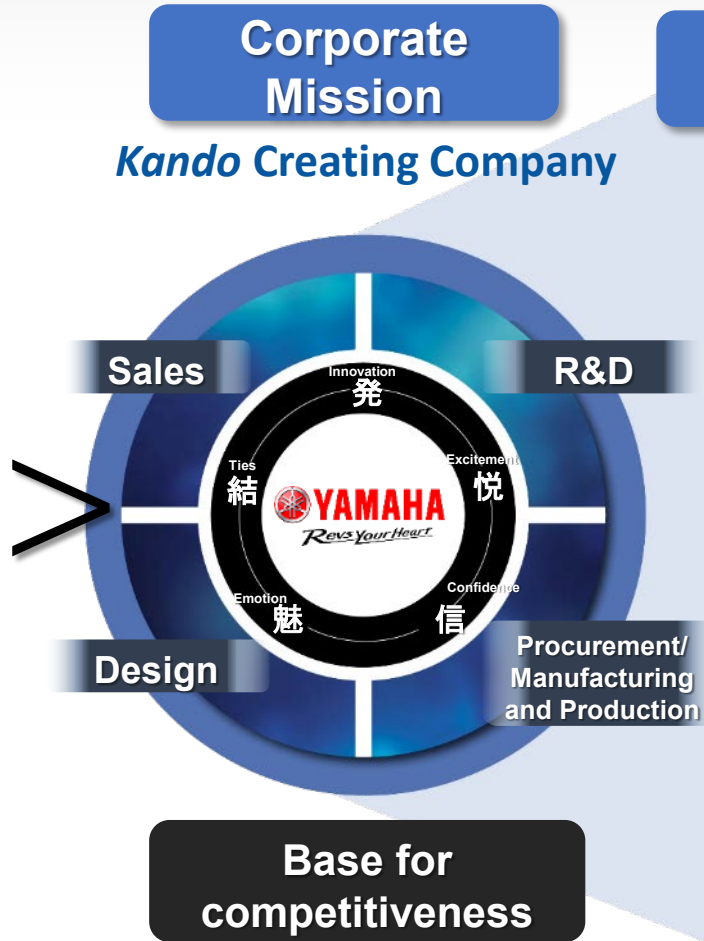

人はもっと幸せになれる

# Yamaha Motor's Growth Strategy and Realized Outcomes

## Important Societal Issues

- Environment and resources
- Transportation, education and industry
- Innovation
- Human capital management

## Business Operations

### Land Mobility

### Marine Products

### Robotics

### Financial Services

### Other

## Growth Strategy Directions

### Long-Term Vision

**ART for Human Possibilities**

*Let's Strive for Greater Happiness*

**A**dvancing Robotics

**R**ethinking Solution

**T**ransforming Mobility

## Outcomes realized

### Environmental value

### Societal value

### Economic value

## ■ Important Social Issues (Materiality)

While leveraging our strengths, we promote initiatives from identifying important social issues to be dealt with.

### Issues directly involved with the sustainability of business models

Environmental  
and Resource

Transportation,  
Education, and  
Industry Issues

### Important issues related to strengthening the foundation

Innovation

Promotion of  
Human Resources  
Utilization

## ■ Support for TCFD proposals, external evaluations

Task Force on Climate-related Financial Information Disclosure (TCFD) - Support for the proposal / Receipt of external evaluation

### June 2018

Selected as a constituent of the "SNAM Sustainability Index"

### May 2019

Task Force on Climate-related Financial Information Disclosure (TCFD) -  
Support for the proposal

### June 2019

Yamaha Motor Chosen for "SNAM Sustainability Index" for Second Straight  
Year

### June 2019

Selected as a constituent of the "S&P Japan 500 ESG"

### June 2019

Selected as a constituent of the "FTSE4 Good Index Series" and "FTSE Blossom Japan Index"

### November 2020

Selected as a constituent of the DJSI "Asia Pacific Index"

### December 2020

Obtained an "A-" in the field of the CDP2020 Climate Change Report, an international non-profit organization

# Yamaha Motor Environmental Plan

---

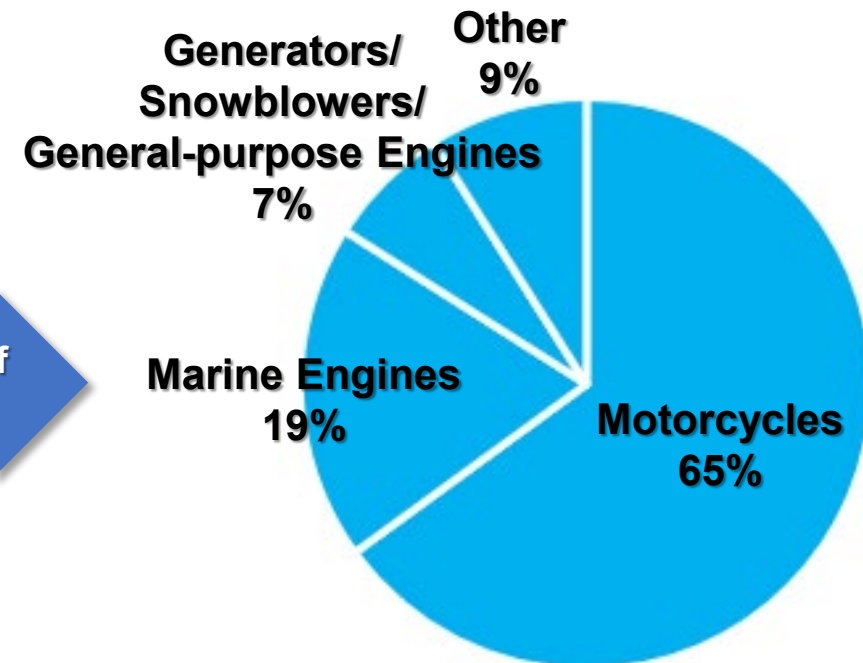

# CO2 emissions from the entire Yamaha Motor life cycle

**Scope 3. Category 11. "During Product Use" account for 82.7% in Yamaha Motor life cycle CO2 emissions. By product, "Motorcycles": 65%, "Marine Engines": 19%**

## Life Cycle Break-down of CO2 Emissions

## Scope 3. Category 11. CO2 Emissions Break-down "During Product Use"

Breakdown of 82.7%

\*Calculated using the "Emissions Intensity Database (ver3.1)" in accordance with the Ministry of the Environment "Basic Guidelines for Calculating Greenhouse Gas Emissions Through the Supply Chain Ver2.3\_December 2017". (Source [https://www.env.go.jp/earth/ondanka/supply\\_chain/gvc/files/tools/unit\\_outline\\_V3-1.pdf](https://www.env.go.jp/earth/ondanka/supply_chain/gvc/files/tools/unit_outline_V3-1.pdf))

# Yamaha Motor Initiatives for Climate Change

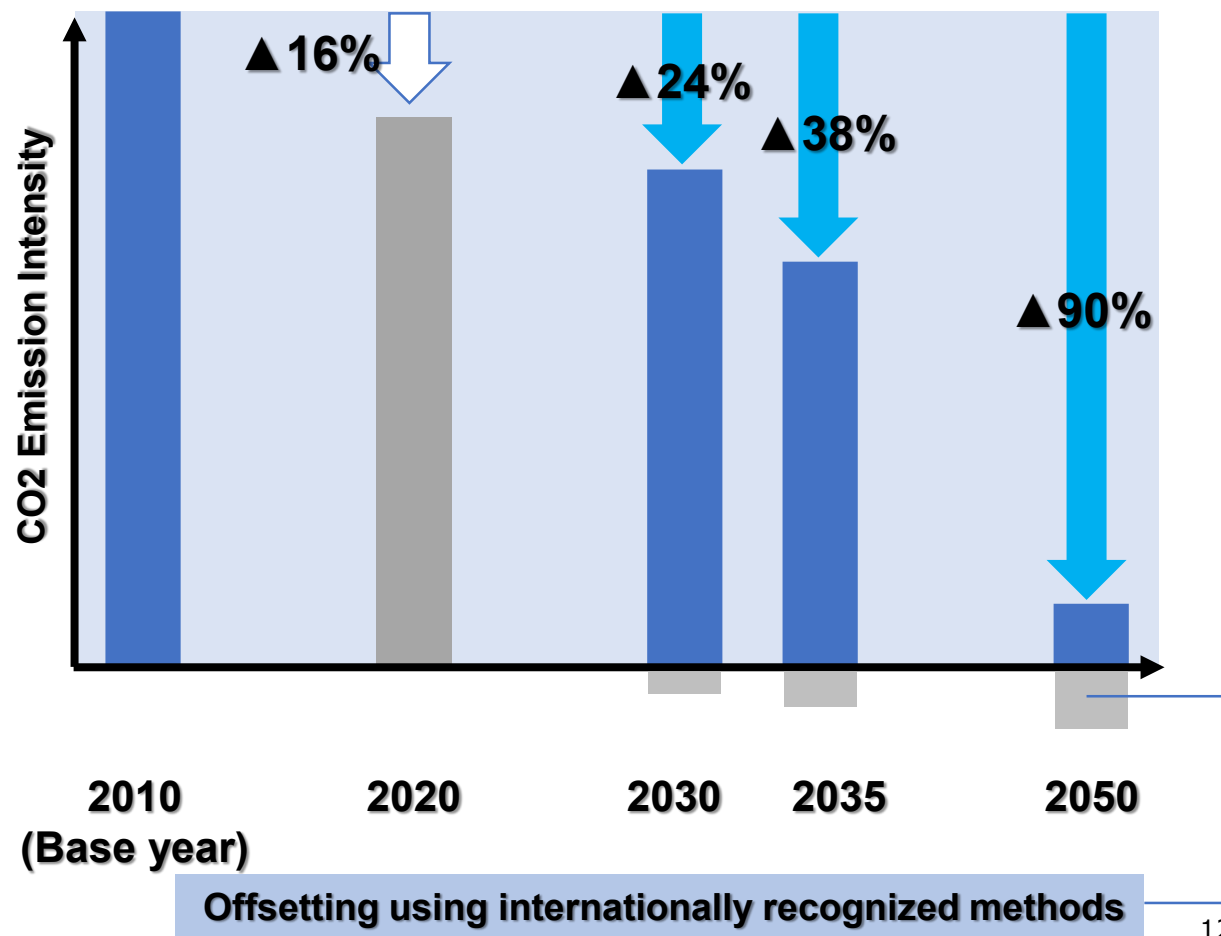

**"Emissions other than Scope 1.2. (Scope 3./ Mainly for total emissions from product groups)"**  
**2030 ▲24% (compared to 2010). 2050 Carbon neutral**

**Company emissions in corporate activities (Scope 1./2.) Targets**

**Emissions other than Scope 1.2. (Scope 3.) Targets**

Reduction target mainly for total emissions from product groups (motorcycles, outboard motors, industrial robots, etc.)

## ■ Environmental Funds

**In order to accelerate the development of environmental technology that Yamaha Motor should work on, the company will establish its own fund specializing in the environmental resources field**

### Environmental Resources Field - Overview of Yamaha Motor Fund

- **Fund Name** : Yamaha Motor Climate Scrum Fund (Draft)
- **Business Operations** : Search activities and investment of venture companies specializing in the environmental resources field  
Total operation amount 100M dollars, Operation period 15 years
- **Establishment** : 2022 (Scheduled)
- **Business Location** : US / Silicon Valley
- **Administrator** : Yamaha Motor Ventures & Laboratory Silicon Valley Inc.
- **Purpose and Expectations** :
  - **Supporting new businesses that contribute to the maintenance / improvement of the global environment**
  - **Focus on areas where we should work on solving environmental resource issues**
  - **Consider investing in growth potential businesses without specifying the region**
  - **Aiming to build new businesses that will lead to the acquisition of negative carbon in the environmental resources field**

Yamaha Motor***

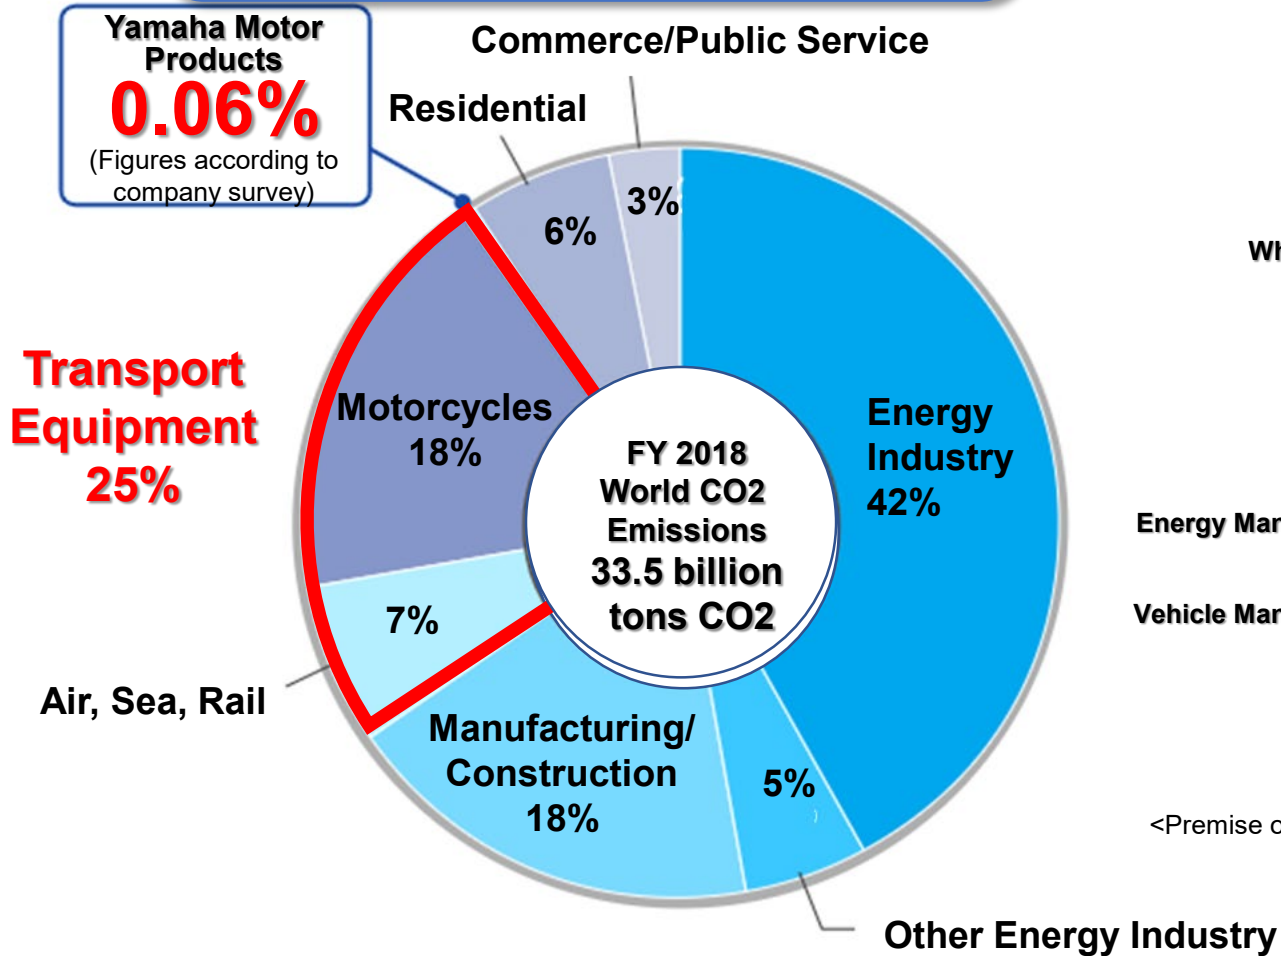

***Compact Mobility***

# Motorcycles - CO2 Emissions Impact

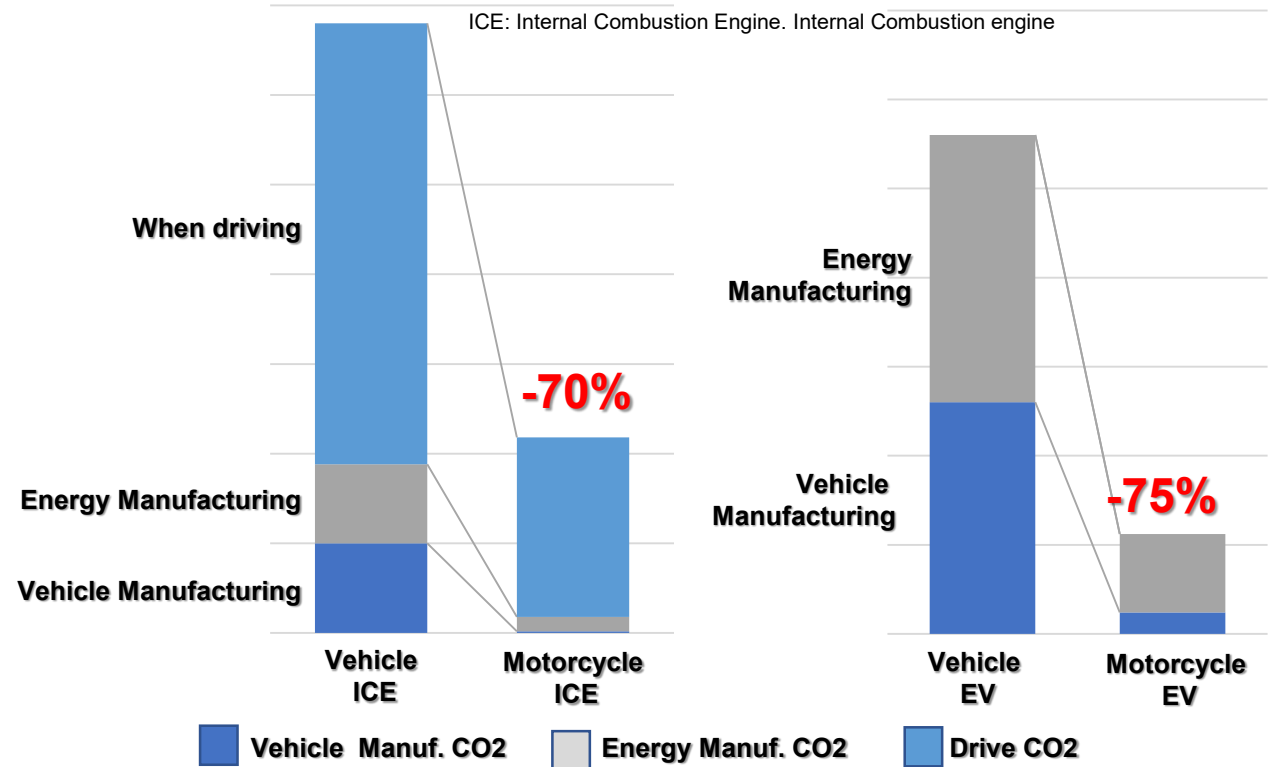

"Compact Mobility", one of the earth-friendly means of transportation compared to four-wheeled passenger cars

### Global CO2 Emissions by Source

Source: Created from the IEA "CO2 Emissions from Fuel Combustion 2019 Highlights"

### Product Life cycle CO2 Emission Comparison

<Premise of Trial Calculation>

Vehicle Manufacturing: Raw Materials, Battery Manufacturing, Assembly, Disposal

Energy Manufacturing: Fuel Manufacturing / Electricity Manufacturing

Four-wheeled Vehicles: IEA standard / Two-wheeled vehicles: Yamaha Motor 125 cm3, two-wheeled EV has the same output class as shown on the left

Annual driving 15,000km, usage period 10 years

Reference: IEA "Global EV Outlook 2020"

# ■ "Environmentally friendly" compact mobility that Yamaha Motor continues to provide

1993 Continues to develop "compact mobility" that in-line with Yamaha Motor and low environmental load such as the world's first electrically power assisted bicycle

1993 onwards

World's first electrically power assisted bicycle  
"YAMAHA PAS"

2002 onwards

First in Japan Mass-produced electric motorcycle  
"Passol"

2005 onwards

Development of fuel cell vehicle  
Monitor use "FC-me"

2019 onwards

Replaceable battery EV  
EC-05

Current

Various Electric Products

In the unique style of Yamaha Motor  
Developed small eco-friendly mobility

## ■ Electric Assisted Bicycle Market

The compact mobility "electrically assisted bicycle" created by Yamaha Motor has become a larger global market.

"Electric power assisted bicycle / E-BIKE" Total demand trends in Japan, the United States, and Europe

## ■ Future movements drawn by Yamaha Motor

**Solving social issues through the development of "compact mobility" that has a low environmental impact and is fun**

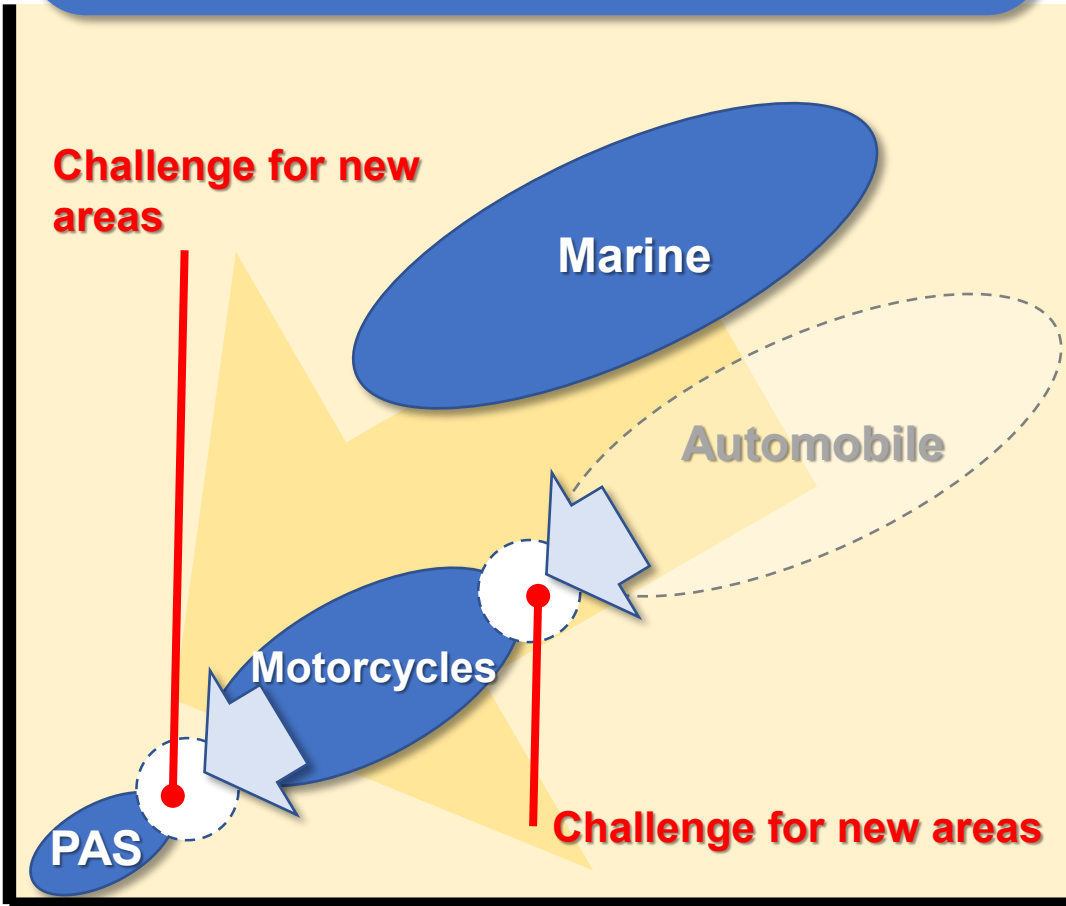

# Carbon-neutral strategy in line with the unique style of Yamaha Motor

**Basic Policies: Aim to further reduce CO2 emissions per person due to movement**

CO2 Emissions Generated by Movement/Person

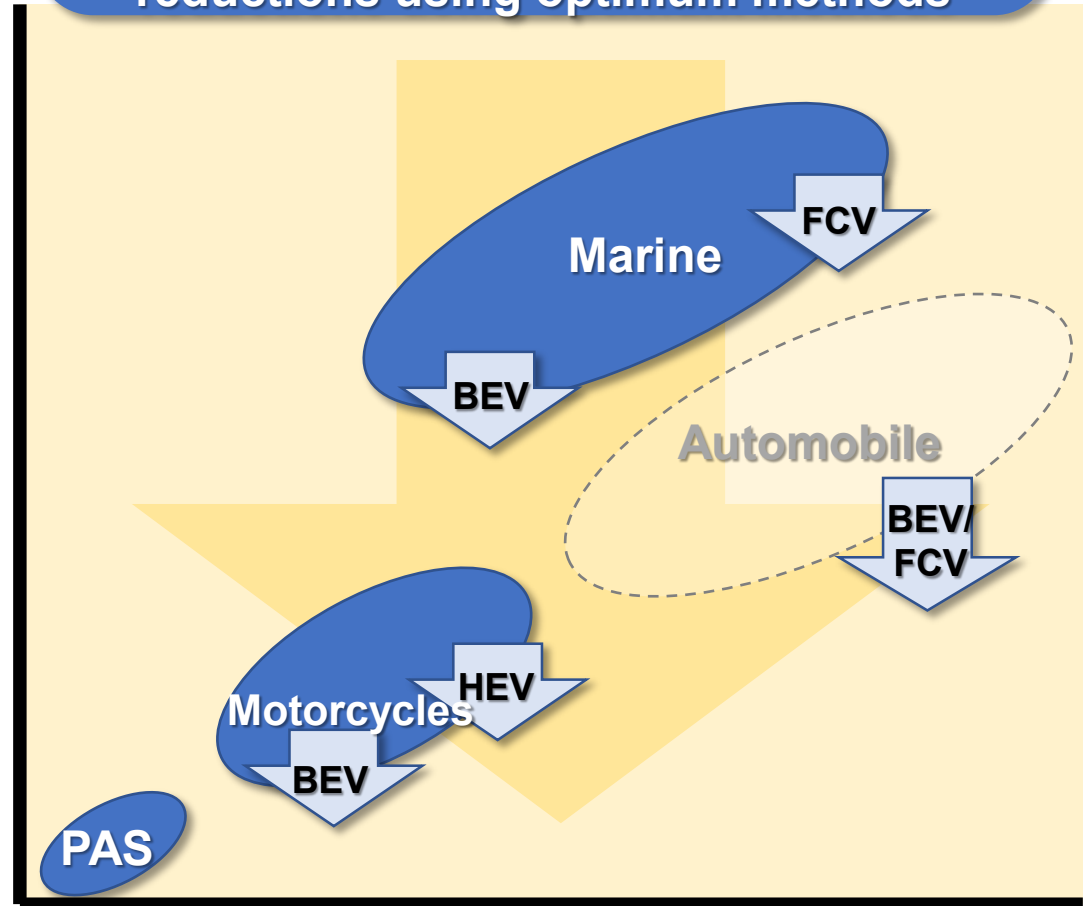

## Utilization of Compact Mobility

Vehicle size

CO2 Emissions Generated by Movement/Person

## Promoting efficiency and, CO2 reductions using optimum methods

Vehicle size

# Internal Combustion Development

## ~ Toward the future

### Balancing carbon neutrality and improving customer value

- Improved thermal and drive efficiency
- Compliant with environmental regulations
- Compliant with CN Fuel
- In pursuit of human-machine sensuality, Fun creation

- <Thermal Efficiency>
- High Compression Ratio
  - VVA (Variable Valve Actuation)
  - Strengthening In-cylinder Flow
- <Drive Efficiency>
- Electronic Controlled Shift
  - Electronic Controlled Throttle
  - Electronic Controlled AT

## ~ Present (2021)

### High Value Added Powertrain Creation

- Brings out high-quality torque characteristics "Crossplane engine"
- Combines acceleration and environmental performance "BLUE CORE Engine"

## Founded (1950s)

The beginning of the Yamaha internal combustion engine

Emissions Response

EU2

EU3

EU4

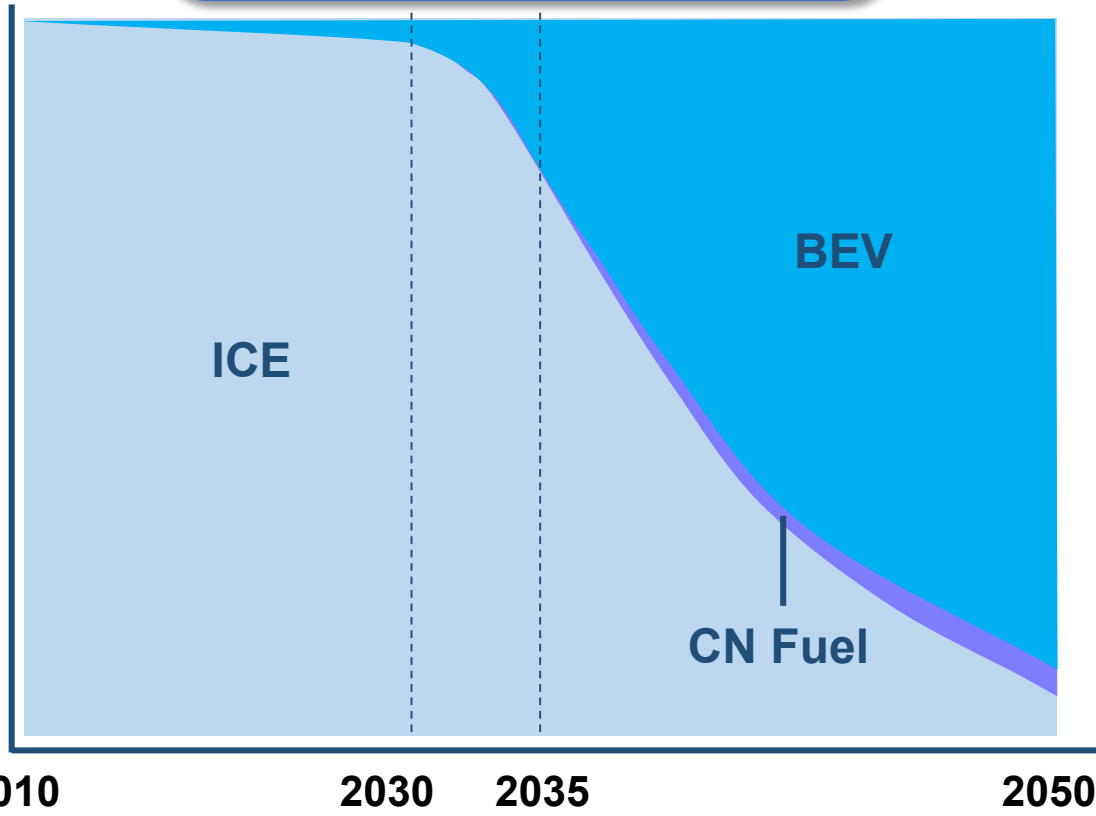

EU5

Post EU5

## ■ Specific Measures

Powertrain composition ratio for motorcycles and outboard motors in order to realize a carbon-neutral society

### Motorcycles

**BEV Targets**                      **2.6%**   **20.0%**                      **90.0%**

### Outboard Motors

**BEV / FCV Targets**                      **21.0%**   **30.0%**                      **81.0%**

# Challenge for new areas

Tokyo Motor Show 2019 reference: Exhibited Model

# MW-VISION

CO2 Emissions Generated by Movement/Person

# Challenge for new areas

Tokyo Motor Show 2019 reference: Exhibited Model

# MW-VISION

## Concept

**Closer to people's senses in order to be more in tune with the city and its people.**

**Human Size Mobility**

## Lean Control Technology

**By combining scooter and EV technology, practicality in everyday use and a high-quality feel that surpasses conventional scooters is achieved.**

**An actuator is mounted on the Front Leaning Multi Wheel (LMW) mechanism, providing a unique lean control technology according to riding conditions.**

# Challenge for new areas

Tokyo Motor Show 2019 reference: Exhibited Model

# TRITOWN

CO2 Emissions Generated by Movement/Person

# Challenge for new areas

Tokyo Motor Show 2019 reference: Exhibited Model

# TRITOWN

## Concept

**Making the last mile fun and enjoyable!**

**We worked hard to make short-distance travel more enjoyable and comfortable.**

## Lean Mechanism

**In the main, we adopted a leaning mechanism using a parallelogram link.**

**It becomes more independent by the rider balancing on the vehicle**

**By placing your feet on both the steps that move up and down on the left and right, you can balance (stop) the movement and stand.**

# Challenge for new areas

## NeEMO

Through customers' daily use, the company will explore new possibilities of utilization such as means of transportation after the returning of licenses and the expansion of life such as **improving physical and mental health by offering greater opportunities to get out.**

## Slow Mobility

Responding to social issues such as depopulation, aging, and labor shortages while also considering future autonomous driving options.

**Providing mobility as a place where people can connect**  
Designed under the idea that interactions will increase inside a face-to-face in-vehicle environment

# Efficiency with the optimal methods

Tokyo Motor Show 2019 reference: Exhibited Model

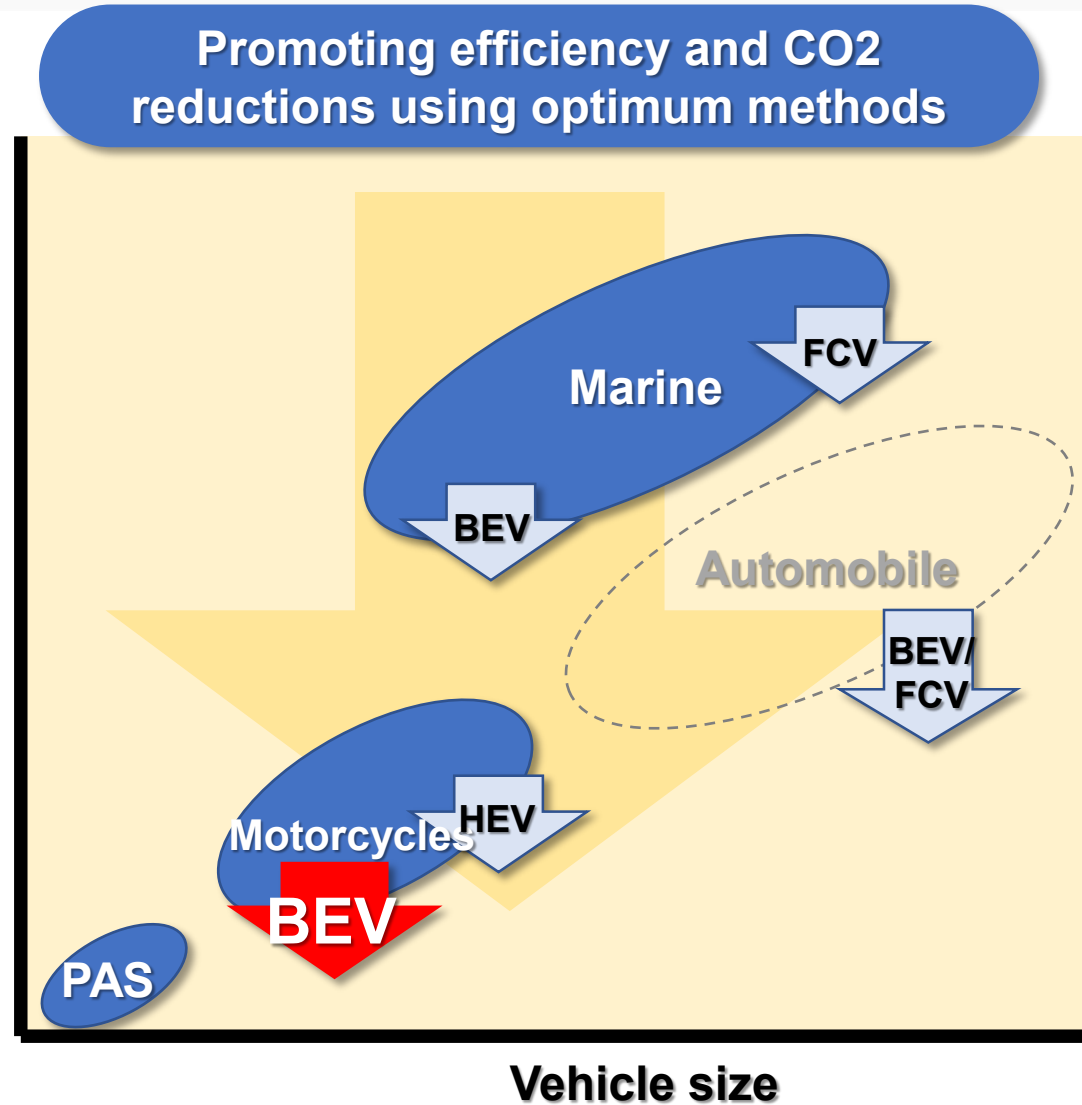

## E01

## E02

CO2 Emissions Generated by Movement/Person

## Concept

A new-generation high-mobility EV platform that leads **the flow of urban transportation and realizes comfortable commuting to work and school**

### High Rigidity Cradle Frame

A double cradle frame structure made of high-strength steel piping that achieves both a rational layout of the motor and battery along with a high-level running performance. By mounting a heavy battery in the center of the unit, higher capacity is secured and greater ride quality is realized by centralizing the mass.

### High Rotation Type Motor

A high-speed air-cooled brushless DC motor developed exclusively for motorcycle characteristics.

Achieves ease of handling in the low-speed range, a feeling of linear acceleration across the entire range, and high-quality high-speed driving from low-speed high torque and high rotation type motors.

### High output, Large-capacity Lithium-ion Battery

High output fixed batteries that enable high-speed driving while satisfying a cruising range designed for everyday use.

The miniaturization of the battery case makes it possible to mount it on a more compact vehicle body, and also supports quick charging that can be carried out to 90% in 60 minutes(\*).

\*Charging time from 0% / When battery temperature is 25°C

## Concept

A platform for next-generation electric commuting **ideal for city travel**

### Lightweight, High-output Removable Batteries

A structure made for the installation of various 48V battery systems (including replaceable ones) expected for each global region. As a removable type that supports home charging, Yamaha Motor has developed a 48V battery that is both lightweight and portable and has high output. Convenience has been improved by devising a fixed structure to facilitate the work of replacing the battery.

### Body Layout Ensuring Storability

Based on the frame of the existing engine models, a relaxed riding posture and sufficient storage space are secured even when the battery is installed. A platform that takes into consideration future product expandability.

### Rear Arm Integrated Power Unit

A direct drive in-wheel motor is used to achieve a more quiet and smooth acceleration feeling. Achieving compactness by consolidating power unit parts on the rear arm.
