New Outboard Motor F350B Launch

Since the discontinuation of the F350A in 2019, there has been a strong demand from many markets for the return of the 350-hp outboard motor. It has undergone an evolution and has been reborn into the F350B, joining the Yamaha outboard motor family.

The F350B is an outboard motor that uses a newly developed V6 engine with a displacement of 4,256 cm³. The newly developed engine is 20% lighter than its predecessor F350A, boasting more power but in a lighter package, enabling it to meet various boating usage in the market. In addition to basic performance, usability improvements and the redesigned shape of the cowling have resulted in a refined outboard motor with a high degree of perfection. After sales begin in the North American market, the product will be gradually rolled out to other countries.

*Please contact a YMC sales representative for the release dates.
