Note 1. The robot cable is flexible and resists bending.

Note 2. [For AGBS10]

When the actuator is used horizontally, the stroke is 2200mm or more, the regenerative unit is needed.

[For AGBS10H]

When the actuator is used horizontally, ①lead 30 is selected, and the stroke is 500mm or more, ②lead 50 is selected, and the stroke is 850mm or more, the regenerative unit is needed.

Note 3. When the motor specification is the standard (S, BK), whether to use the battery needs to be selected.

Note. The return-to-origin direction can be changed by changing the parameter. (The standard is that the origin is located on the motor side. For details about how to change the return-to-origin direction, see the instruction manual for EP-01.)

AGBS10

Note 1. Stop positions are determined by the mechanical stoppers at both ends.

Note 2. The robot cable is extracted from the front.

Note 3. The robot cable is extracted from the rear.

Note 4. When the effective stroke is 2050 mm or more, the reference plane is within 200 mm of the frame end face.

Note. The return-to-origin direction can be changed by changing the parameter. (The standard is that the origin is located on the motor side. For details about how to change the return-to-origin direction, see the instruction manual for EP-01.)

Note. In the installation tap hole, the length under head <<thickness of stand +10mm or less>> is recommended for the hex socket head bolts <M5x0.8> used to install the main unit.

Note. The minimum bending radius for robot cables should be R30 or more for fixed cables / R50 or more for movable cables.
